Dear Ms. Monroe,

I am interested to know when we can expect the results from the testing that was conducted last evening, July 26th. Could you please confirm which day/complaint was used to determine the best conditions for testing. Could you also please confirm for me the exact time the turbines were supposedly powered down for 30 minutes?

I would like to point out that the sound from the turbines last night came nowhere close to the sound that triggered my initial complaint regarding the evening of June 4th. Tonight's noise level however, *is* comparable to the noise experienced on June 4th. It is now almost 9:30 pm and their intensity has only been growing over the past two hours (at least) with no signs of quieting down. I can once again hear them in my home with all the windows and doors shut and over all other sounds in my home. I also observe that it is significantly less windy around my home tonight than it was last night.

While I don't know what last night's testing will show, I find it quite suspicious that the turbines are significantly louder tonight than they were during the testing. I am completely unconvinced that Antrim Wind Energy has not manipulated the situation. I recall reading a complaint from my neighbor, Barbara Berwick, that she experienced the same problem. The turbines were *relatively* quiet during the testing and then conveniently returned back to their normal noise level the following day.

I have great faith in the work of Mr. Tocci and his associates but none at all in the integrity or morals of Antrim Wind Energy. The noise coming from the turbines this evening is absolutely ridiculous.

Sincerely,
Erin Morrison
